Tips for getting the most from your new batteries

Thank you for purchasing batteries from Wholesale Solar. Our goal is to make sure you have the best experience possible with your battery system. With that in mind, we've got a few helpful tips we hope you will follow.

It is normal for batteries to self-discharge over time and, while a bit of self-discharge is totally fine, excessive time-frames with no charge being applied to the batteries can permanently degrade the capacity and overall longevity of the battery bank. We strive to not have batteries on the shelf for longer than a couple of weeks and do have a boost-charge procedure in place for any batteries that require a charge prior to being shipped.

It is your responsibility to take over care of the batteries you've purchased from the moment you take possession of them. Wholesale Solar recommends not letting your batteries sit for longer than one week from the date you receive them without charging them up.

AGM Batteries - Bring to a full state of charge once a week to maintain maximum longevity

Flooded Lead Acid Batteries - bring to a full state of charge once every two weeks to maintain maximum longevity

Wholesale Solar expressly disclaims any and all liability for damage caused to batteries due to a lack of adequate charging techniques starting the moment the batteries are received by the customer and/or installer.

For questions pertaining to batteries and battery charging techniques, please contact Wholesale Solar Technical Support at 1 (800) 472-1142.

Thank you!

Josh The Tech Guy,
