

Trina Micro Inverter Gridtie Systems

Trina Microinverter Grid-tie System, with 9 Trina Solar Panels

System Number: 8922509

At Wholesale Solar we have assembled hundreds of complete solar electric systems. Call us today to discuss your new renewable energy system!

The Trina Micro-inverter Gridtie System is one of the best solar power systems you'll find in today's fast changing market. That's because the solar panels are made by Trina Solar, a reputable manufacturer that's vertically integrated, and are paired with microinverters by Enphase Energy, a company at the forefront of inverter technology and growing at lightning speed.

Because each panel is paired with its own inverter with a built-in MPPT charge controller, it is an expandable system. You can literally add one solar panel and one Enphase Microinverter at a time.

Pieces of equipment that make up this system:

- 9 Trina 225-watt modules
- 9 Enphase M190 Micro-inverters (240 VAC)
- 2 Enphase Install Kit, AC Branch Circuit

Be sure to check out Wholesale Solar's Online Enphase Demo

This system qualifies for a Federal Tax Credit of 30% of the installed cost!

Trina Solar Panels are competitive high-quality modules

Whether you're comparing price or quality, Trina Solar is one of the most competitive manufacturers of PV modules in the world. That's because their vertically integrated structure allows them to have a tight grip on quality control.

Trina solar panels boast a high tolerance ratio and are thoroughly tested for strength and durability in the harshest of conditions, whether its freezing or blazing hot.

Enphase MicroInverter

The difference between an Enphase micro-inverter and a traditional inverter is that you use one inverter per solar panel rather than a series of solar panels. This means you do not have to invest in a larger more expensive inverter at the onset of your project or when you are ready to expand your system. With the Enphase Micro-inverter, you can add one solar panel and one inverter at a time, as your finances and time allow.

Be sure to ask about Wholesale Solar's online demonstration which compares the power of several different panels, each paired with their own Enphase Energy Microinverter.
